

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A facsimile comprising:

a scanner for capturing an image;

a memory card reader for ~~loading and unloading a memory card and reading~~ image data from said a memory card;

~~an operating unit;~~

a modem for modulating and demodulating image information into and from the data that can be transmitted and received through a communication line;

an operating unit operable to be coupled to the memory card reader, the modem, and the scanner, the operating unit being operable to select an image from one of the memory card, the communication line, and the scanner; and

~~an image data format converter for converting image data read out from said memory card into data in a format for a facsimile transmission; and~~

a printing unit for printing the selected image, according to an instruction from said operating unit, ~~an image corresponding to the image data read out from said memory card, an image corresponding to the image data received through said communication line, and the image captured by said scanner.~~

2. (Currently Amended) The facsimile according to claim ±20, wherein said ~~printing unit prints, according to said operating unit, the information corresponding to the image data read out from said memory card comprises at least one a~~ thumbnail corresponding to the image data read out from said memory card.

3. (Currently Amended) The facsimile according to claim 2, further comprising:

a display for displaying ~~the said at least one~~ thumbnail corresponding to the image data read out from said memory card; and

a controller operable to:

select a specific thumbnail from ~~the said at least one~~ thumbnail displayed on said display with said operating unit; and

make said printing unit print an image corresponding to the specific thumbnail.

4. (Currently Amended) The facsimile according to claim 3, wherein said controller is operable to select one from: allowing the printing unit to print the image corresponding to the specific thumbnail after said printing unit prints ~~the said at least one~~ thumbnail; and allowing the printing unit to print the image corresponding to the specific thumbnail without printing ~~the said at least one~~ thumbnail by the printing unit after said display displays ~~the said at least one~~ thumbnail.

5. (Currently Amended) The facsimile according to claim 3, wherein said operating unit comprises numeric keys for selecting specifying the specific thumbnail from said at least one thumbnail.

6. (Currently Amended) The facsimile according to claim 3,

wherein said display displays a detailed image corresponding to the specific thumbnail if said ~~operating unit controller selects specifies~~ the specific thumbnail, and

wherein said printing unit prints the detailed image according to an instruction from said operating unit.

7.-10. (Cancelled)

11. (Currently Amended) A communication terminal comprising:

a memory card reader for loading and unloading a memory card and reading image data from said memory card,

a receiver for receiving image information through a communication line, and

an operating unit operable to be coupled to the memory card reader and the receiver, the operating unit being operable to select an image from one of said memory card and said communication line, and

a printing unit for printing the selected an image, corresponding to the image data read out from said memory card, and an image data corresponding to the image information received through said communication line.

12. (Currently Amended) The communication terminal according to claim ~~11~~24, wherein the information corresponding to the image data read out from said memory card comprises said printing unit prints a at least one thumbnail corresponding to the image data read out from said memory card.

13. (Currently Amended) The communication terminal according to claim 12, further comprising:

a display for displaying ~~the list of the~~said at least one thumbnail corresponding to the image data read out from said memory card, and

a controller operable to

select a specific thumbnail from said at least one thumbnail displayed on said display with said operating unit; and

make said printing unit print an image corresponding to the specific thumbnail, ~~selected from the list of the thumbnail displayed on said display means.~~

14. (Currently Amended) The communication terminal according to claim 13, wherein said operation unit controller is operable to select allow the printing unit to printing print the image corresponding to the specific thumbnail after said printing unit prints the said at least one thumbnail, and to print the image corresponding to

~~the specific thumbnail without printing the thumbnail after said display displays the thumbnail.~~

15. (Currently Amended) The communication terminal according to claim 13, further comprising numeric keys for ~~specifying~~ selecting the specific thumbnail.

16. (Cancelled)

17. (Currently Amended) The communication terminal according to claim 11, further comprising an image data format converter for converting the image data stored in said memory card into data conforming to the ITU-T T.81 Standard.

18. (Original) The communication terminal according to claim 11, wherein said memory card is a secure digital (SD) memory card.

19. (Currently Amended) The communication terminal according to claim 11, further comprising an image data format converter for converting a JPEG image data in a JFIF format of TIFF into data conforming to the ITU-T T.81 Standard.

20. (New) The facsimile according to claim 1, wherein said printing unit prints, according to an instruction from said operating unit, information corresponding to the image data read out from said memory card.

21. (New) The facsimile according to claim 20, further comprising a display for displaying the information corresponding to the image data read out from said memory card.

22. (New) The facsimile according to claim 3, wherein said controller is operable to automatically control said display for allowing said display to display said at least one thumbnail if said operation unit selects the image from the memory card.

23. (New) The facsimile according to claim 1, wherein the memory card is detachable from said facsimile.

24. (New) The communication terminal according to claim 11, wherein said printing unit prints information corresponding to the image data read out from said memory card.

25. (New) The communication terminal according to claim 24, further comprising a display operable to display the information corresponding to the image data read out from said memory card.

26. (New) The communication terminal according to claim 13, wherein said controller is operable to automatically control said display for allowing said display to display said at least one thumbnail if said operation unit selects the image from the memory card.

27. (New) The communication terminal according to claim 12, further comprising a display for displaying said at least one thumbnail.

28. (New) The communication terminal according to claim 11, wherein said printing unit prints a detailed image of the image data.

29. (New) The communication terminal according to claim 11, further comprising an image data format converter for converting the image data stored in said memory card into data in a format for a transmission via a telephone line.

30. (New) A facsimile comprising:

a communication interface for transmitting and receiving image data through a telephone line;

a printing unit for printing image data;

a memory card reader for reading image data from a memory card loaded to the memory card reader; and

an operation unit operable to select one from: (a) allowing the communication interface to transmit the image data read from the memory card to the telephone line; and (b) allowing the printing unit to print the image data read from the memory card.

31. (New) The facsimile according to claim 30, wherein the printing unit is operable to print information about the image data read from the memory card.

32. (New) The facsimile according to claim 30, wherein the printing unit is operable to print a thumbnail of the image data read from the memory card and information corresponding to the thumbnail.

33. (New) A facsimile comprising:

a communication interface for transmitting and receiving image data through a telephone line;

a scanner for capturing image data;

a memory card reader for reading image data from a memory card loaded to the memory card reader; and

a printing unit operable to print the image data received by the communication interface, the image data captured by the scanner, and the image data read from the memory card;

a controller operable to allow the printing unit to print information corresponding to the image data read from the memory card.

34. (New) The facsimile according to claim 33, wherein the information comprises thumbnails of the image data.

35. (New) The facsimile according to claim 33, wherein the information comprises thumbnails of the image data and respective numbers corresponding to the thumbnails.

36. (New) The facsimile according to claim 33, further comprising a display operable to display information about a printing operation by the printing unit.

37. (New) The facsimile according to claim 33, further comprising an operation unit for inputting a number indicating the image data to be printed by the printing unit.

38. (New) The facsimile according to claim 37, wherein the operation unit comprises numeric keys for inputting the number, wherein the controller is operable

Application No.: 09/855,270
Amendment Dated: February 14, 2005
Reply to Office Action of: November 17, 2004

MAT-8128US

to allow the printing unit to print the image data corresponding to the number input via the numeric keys.
